REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

4 The independent claims 1 and 7 of the present application teaches, for example,

Art Unit: 2112

A method for determining an error rate in a data transmission from a transmitter/receiver station to a transmitter/receiver device, wherein a first data block and at least one further, redundant data block different from the first data block are generated by the transmitter/receiver station from an original data block and, in the event of an error transmission of the first data block, a further, redundant data block is requested by the transmitter/receiver device, comprising the steps of:

transmitting a first data block by the transmitter/receiver station, receiving the first data block by the transmitter/receiver device, decoding the first data block received in a decoding block, checking the first data block for transmission errors,

requesting a further, redundant data block for error correction, if an error is determined in the

transmitted data of the first data block,

receiving the request in the transmitter/receiver station,

retransmitting the first data block, and

determining the rate of the incorrectly received first data blocks, without error correction, and

wherein a further, redundant data block is additionally transmitted by the transmitter/receiver station in the event of a request for a further data block, in order to compare the determined error rate without error correction with an error rate with error correction by incremental redundancy.

The foregoing limitations are not found in the prior art of record.

Particularly, none of the prior arts of record teach nor fairly suggest,
